SHELTER INTRODUCTION

FOR THE

MARINE CORPS FIELD LOGISTICS SYSTEM

FINAL REPORT

DECEMBER 1980

APPENDIX D

SHELTER INTRODUCTION FOR THE MARINE CORPS FIELD LOGISTICS SYSTEM

Final Report

December 1980

Prepared under
U.S. Marine Corps
Contract No. M00027-80-G-0031

Northrop Services, Inc.
1700 North Lynn Street
Suite 1100
Arlington, Virginia 22209

APPENDIX D
SHELTER INTRODUCTION
FOR THE
MARINE CORPS FIELD LOGISTICS SYSTEM

1. INTRODUCTION

The shelter introduction appendix has been prepared as part of the Master Implementation Plan for the Field Logistics System (FLS) within the active and reserve forces of the Fleet Marine Force (FMF).

This appendix utilizes the quantities of shelters shown in the Marine Corps Expeditionary Shelter System Qualitative/Quantitative Requirements Update Study (MCESS) of 8 February 1979. Minor modifications were made due to force structure changes.

2. PURPOSE

The purpose of this appendix is to show a logical and orderly means of implementing MCESS based on a sound system of priorities. It also is intended to be a "working" document that will allow for changes in equipment, organizations, and force structure during the implementation period.

3. BACKGROUND

The shelters update study was completed at the Marine Corps Development and Education Command (MCDEC). The shelter requirements stated in that study (table D-1) were confirmed and adopted by Headquarters Marine Corps (HQMC).

Table D-1. MCESS Requirements

Type Shelter	IO
8'x8'x10' EMI	984
8'x8'x20' EMI	277
8'x8'x20' Knockdown	6,114
8'x8'x20' Rigid GP	4,762

Table D-1. MCESS Requirements (Continued)

Type Shelter	IO
7'x7'x11' Joining Corridor	2,546
20'x33' Shelter	592
32'x73' Shelter	365
60'x128' Shelter	186

Due to the quantity of shelters required, it was determined that a 10-year phase-in plan was desirable. In order to meet urgent requirements and/or fill inadequacies, it was necessary to develop a system of priorities based on replaced Table of Authorized Material (TAM) items, functions, and units. The development of the plan commenced in May 1979, and it now encompasses the phase-in of 15,826 MCESS items.

4. PRIORITY SYSTEM

It was necessary to separate the shelter requirements into two categories in order to develop a sound system of priorities. The first category includes MCESS items that replace current hard shelters such as M109 vans or communications shelters. The second category includes MCESS items which are new assets or replace current soft shelters (tents). These two categories are treated independently.

4.1 HARD-TO-HARD CONVERSIONS

By utilizing the shelters update study, a list of all current hard shelters being replaced and the MCESS replacement item(s) was prepared. For each hard shelter being replaced, the projected wear-out or exit date was obtained from HQMC and confirmed by Marine Corps Logistic Base (MCLB), Albany. The MCESS replacement items were then listed in order of their projected wear-out date.

4.2 SOFT-TO-HARD CONVERSIONS

The identification and prioritization of future MCESS functions was necessary in order to develop an orderly phase-in rationale to replace existing tentage. The identified functions, in sequence of importance, are as follows:

o Communications/Electronics. Currently there is insufficient space in soft shelters to rebuild components, calibrate equipment, and store equipment being repaired. There are also inadequate controls for dust, mildew, humidity, and temperature. Furthermore, lighting is inadequate for performing certain calibration and precision repair operations.

o Maintenance. Currently there is insufficient space in soft shelters to rebuild components and store equipment being repaired. Soft shelters do not provide adequate height for conducting maintenance on large vehicles and other equipment. The use of overhead hoisting gear is limited and equipment cannot be attached to the walls. There is no decking to support heavy equipment such as lathes.

o Supply. Tents do not provide adequate storage space or access for handling of palletized material by material handling equipment (MHE). Additionally, storage of certain items requires humidity control which cannot be provided in tents.

o Medical functions. Tents cannot be adequately air-conditioned, heated, or made sanitary for optimum handling and treating of combat casualties. Such stabilizing controls are required for operating room, patient ward, and medical material storage subfunctions. This function presently does not include MCEMS functions.

o Operations/Administration. Soft shelters cannot provide the requisite environmental conditions for computer operations and food services.

In addition to functional area priorities, priority on a "MAF-by-MAF" basis was established. The MAF priority sequence is as follows:

- o II MAF
- o I MAF
- o III MAF
- o IV MAF

5. PROGRAM MANAGEMENT

In order to manage the MCESS program throughout the implementation period, it was necessary to record the shelter requirements at the individual unit level. Recognizing that the force structure will change and individual units will be added, deleted, or modified, it was necessary to develop a working paper that could be changed as needed and still serve as a unit level implementation plan. A phase in plan was and is shown in figure D–1. The completed work sheets are included attached of this appendix.

By using this form as a working paper, the organizational changes and/or MAF multiple modifications can be recorded, and the requirement changes can be reflected in overall procurement projections. The functional priority codes that appear in the phase-in plan recording sheets are depicted in figure D–2.

The unit level recording document, figure D–1, displays the organization by Table of Equipment (T/E) number and by name, the quantity and current TAM item being replaced, the function (by code) being performed, the end of life cycle (if applicable), and the quantities of all MCESS replacement items by unit and by MAF, by procurement year and by phase-in year.

Figure D–2. Functional Areas

Tables D–3 and D–4 reflect basic priority quantities based upon the force structure as published in the P20As on 11 July 1980. Table D–3 depicts quantities of MCESS shelters required by year to satisfy replacement of current hard shelters. The replacement is based upon the life expectancy of current shelters. In comparing table D–3 to the recommended POM 83 (appendix B), it is evident that the priority requirement for hard-to-hard replacements cannot begin prior to FY83. For example, the current POM 82 submitted to OMB indicates an initial procurement of fifty-six 20-foot EMI shelters in FY82. However, using life expectancy criteria, 135 20-foot EMI shelters are required in FY82 as shown in table D–3. Due to POM limitations of this nature, yearly modifications to this plan will be necessary. Similar factors will affect the scheduling of shelters for the replacement of tentage which are listed by functional area priority in table D–3.

Additional shelter allocations are depicted in table D–5. They include quantities required for operational readiness floats, maintenance floats, general support forces, and pre-positioned war reserves. The general support requirements include training shelters for the Engineer and Service Support Schools at Camp Lejeune. All of these shelters are programmed for procurement during the out-years. However, training considerations may dictate changes to the procurement schedule.

6. MCESS IMPLEMENTATION PLAN

The recording documents that follow are intended to serve as the baseline for the phase-in of MCESS. They are aligned in sequence according to the previously discussed priority system. As funds are increased or decreased, appropriate documentation can be modified. The MCESS Phase-In Plan, which follows, is composed of two segments: part I, Hard-to-Hard, and part II, Soft-to-Hard.
